Dale - Running Work Log

Owner of record: Dale (assigned by Leon Tucker). Living document; updated as work progresses.

Mandate (Oct 18 2026)

- Leon handed over Afterglow and Arcadeline, and later put Dale in charge of every completed, live game.

- Decision: Afterglow and Arcadeline merge into one lobby called Glowline (glowline.leonlink.net).

- Access: GitHub (leonptucker3886-lab), Vercel (account leonlink, Hobby plan), Supabase (OAuth).

Inventory: GitHub repos active Oct 4-18

- 21 repos. Games: Veyl Trilogy (3 repos), for-the-major-general, joustline, arcadeline, afterglow, rhymeline, stop-z-fighting, storyforge-legends (empty).

- LeonLink sites: leonlink-hq, stonewall, leonlinks, leonlink-home, no-sacred-cows, ledgerline, proofline.

- Products: freelancer-dashboard-app/landing, burn-book (+ empty duplicate Burnbook).

System review: Afterglow

- Vanilla JS modules with no build step. About 25 games (slots, table games, instant games). Provably-fair page.

- Economy: starts at 10k Glow, 7 tiers, about 33 achievements, daily wheel/drop/refuel.

- Stripe packs: 10k/$0.99, 65k/$4.99, 160k/$9.99, 400k/$19.99. Each purchase is redeemed once via Stripe metadata (small race window).

System review: Arcadeline

- 22 games in 5 categories. Practice mode or a paid Glow run. Leaderboards, badges, challenge links.

- Shares Supabase project cjtutkvhyzjsgclqvylg with Afterglow. Glow balance = arc_profiles.tokens.

Findings: security

- CRITICAL: Glow balance trusted the browser. arc_glow_delta accepted up to 10M per call, guest coins merged into accounts on sign-in, and arc_submit_score accepted any score.

- Impact: unlimited Glow could be minted and leaderboards faked, which undermines the paid packs.

Actions taken (Oct 18, 08:40-08:43 UTC)

1. Supabase migration applied (live for current sites): max 2M per call, 5M net per player per 24h, 60 balance changes per minute, audit/history table, new-account starting balance capped at 10k.

2. Created GitHub repo glowline with a lobby shell (Casino / Arcade / Leaderboards tabs, wallet header).

3. Created Vercel project glowline, added and verified the domain glowline.leonlink.net, deployed to production.

4. Freelancer Dashboard objects in the same Supabase project were left untouched.

Open issues

- Tabs embed the old sites in iframes; it hasn't been checked whether those sites allow framing.
- Header wallet isn't wired to real balances yet.
- Cheating is capped, not eliminated; needs server-side game outcomes.
- Only 7 of 22 arcade games have score rules; the other 15 currently reject scored runs.

Next steps

1. Port both game sets into the glowline repo, rebrand them, and wire up the wallet.
2. Add score rules for the remaining 15 arcade games.
3. Move game outcomes to the server; redirect the old URLs once Leon approves.
4. Audit the rest of leonlink.net for other completed, live games.
